

E-BIZ. Intelligent Solutions

E-BIZ was born already thinking of looking for a technology that potentiated the intellectual capital of both institutions. Its difference is the use of artificial intelligence as platform for managing projects and developing solutions. Customers from various industries, from corporations to government bodies, approve the quality of E-BIZ solutions. Police (Investigation, Technical Police, Information Audit) and Corporate Intelligence Solutions, Knowledge Management, Digital Management of Documents, Management of governmental programs specialized in Education, Electronic Government (e-Gov), and Telecommunications, Finance, and Insurance Company Solutions are part of E-BIZ portfolio.

Project development uses service providing model (consultancy) as specialized labor and its major difference is the integration of Artificial Intelligence discipline to customer's business. Thus, its Project and Technology (Development, R&D&I and Projects) team works as a supplementary structure to Customer's Project department enabling a high added value in creating solutions.

Partnerships with manufacturers and educators also complement our development in creating more effective and competitive solutions, which guarantees access and support to what is the best and the more groundbreaking in IT market.

Universidade Federal de São Carlos is an university renowned by its high level of qualification of its faculty and it was recently ranked as one of the three best universities in Brazil. Along with Computing Department, one of the leading academic centers in research and development of advanced technology, **E-BIZ SOLUTION SA Soluções Tecnológicas** builds a partnership for **R&D&I**, which aims to transform research in innovative products in Artificial Intelligence, Image Recognition, and other fields.

This partnership aims bring together researches carried out by UFSCar and needs of practical applications identified by E-BIZ, producing results that have benefits both in academic point of view (research validation, paper publication, monographs rationales, dissertations and/or theses) and in corporate point of view (prototype building, technological innovation, market differentiation). Thus, E-BIZ becomes a national reference in University-Company relationship.

E-BIZ also relies on a partnership with IBM through IBM Partner World program. It takes advantage of its tools and RUP method, and provides its customers with innovative and high quality technology solutions.

Besides IBM, E-BIZ counts on Intersystems SOA solutions, on Microsoft GOLD partnership in developing solutions based on Framework.Net, on Oracle as a member of ORACLE Partner Network program, one of the first Brazilian companies to have its products ABOVE certified, and finally on SUN Partner Advantage Program, which provides E-BIZ with the best solutions related to *cross-plataform* JAVA® technology and access to the most robust servers in the market.
